

Low-contrast oblate spheroid: $\Delta n = 0.01 \times$ current contrast
 $n_p = 1.335677718660$; $n_m = 1.335381534$; $\lambda_0 = 532$ nm; $a(z) = 3$ μm , $b(x,y) = 5$ μm
 $y = 0$; raw total fields; $|E_0| = 1$; magnitude scale shared within each row; one phase scale for all rows
